About

Hi! My name is Gergely from Budapest, Hungary, and I'm 30 years old. I've always been excited about two things: **People** and **new technologies**. I feel extremely frotunate about my job allowing me to design interactions between my two passions.

Personality:

I am enthusiastic and blessed with vivid imagination. I have the ability to quickly identify the relationship between things, and thus act with confidence. I often need the support from others, but I also give support to my environment. I rely on my sense of communcation, and improvise successfully.

Experience

I have been working as a graphic / web designer and developer for about 5 years.

Employment:

In 2012 Eltec Group Ltd. (a cable manufacturing company) employed me as a graphic designer. Initially, I was responsible for designing print media and for the maintenance of Eltec's corporate identity. But after a few months, I was transferred to a newly formed department, the "Creative Group".

I have begun learning HTML, CSS, and JS in the mids of 2013. Within six months, I became the main front-end developer and designer of our new major project, developing the company's own web-ERP system.
I dove into clean, user centric design, UI & UX design, data visualization, SVG- and CSS keyframe animations, modern front-end workflow, mobile performance optimization, jquery, web- and iconfonts, wordpress and so on.
At the end of 2014 I decided to part with Eltec. I wanted to do smaller but more diverse projects.

Freelance:

I became an individual entrepreneur in 6th of March, 2015 and I have been working as such ever since. At the beginning I mostly took part in designing and developing custom built websites with a great focus on user experience design. I also participated in online courses to extend my knowledge in full stack web development and multiplatform web app development (angularJS, ionic framework with cordova), but sadly I never had the chance to put my acquired skills into action. In the last 2 years most of my projects were wordpress based.

Future aims:

I love designing, but I also love coding. I learned to code because I considered it a design tool, to achieve a certain goal. Right now I'm mostly interested in deepening my skills in user experience design, and becoming a better designer altogether.

Education

2015-2016   **The Hong Kong University of Science and Technology**
Full stack web development (Online course)

2015   **The University of New Mexico**
Interactive Computer Graphics with WebGL (Online course)
