

WORKS

eCenter
Enterprise Resource
Planning System

UI/UX design, front end
development

The image displays the eCenter Business Management Software. At the top, the eCenter logo is shown with the tagline "Business Management Software". Below the logo, there are four devices showing the software's user interface: a desktop computer, a laptop, a tablet, and a smartphone, all displaying the same login screen with the eCenter logo and "Belegan" text.

The middle section features a circular diagram illustrating the integrated modules of the system. At the center is a monitor icon with the eCenter logo. Surrounding it are five interconnected modules: MRP (manufacturing resource planning), CRM (customer relationship management), HRM (human resource management), SCM (supply chain management), and FRM (finance resource management). Each module is represented by a circle containing its acronym and a brief description, with various icons around it. A central "Database (info repository)" icon is connected to each module via bidirectional arrows, indicating the data exchange between the core database and the different business functions.

The bottom section shows a grid of six circular icons representing specific business functions: a hand truck with boxes, a welding mask, a clipboard with a checklist, a microscope, a stack of blocks, and a stack of papers. To the right of these icons are two large, stylized logos for "EOPS": one in light blue on a white background and one in white on a dark blue background.

Components

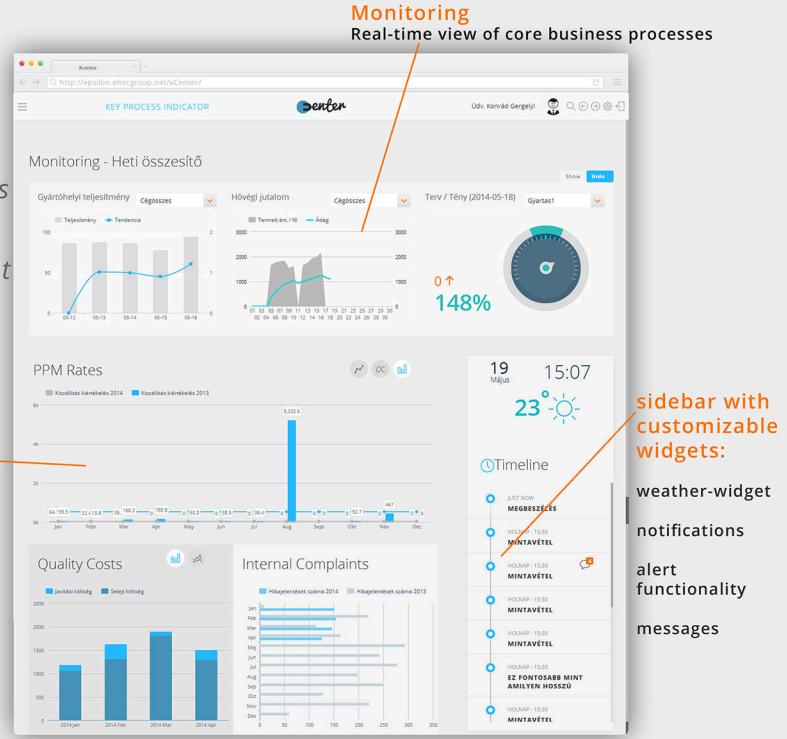

- **Dashboard - KPI**
(pro-active approach)
- User Profile page**
- Measurement, Analytics**
- Resource planning**
- Document management**
- Messaging / Chat**
- Workflow management**

Global key processes

Example:

Business resources (cash, raw material, product capacity, etc.)

Business commitments (orders, purchase orders, payroll, etc.)

Dashboard

The dashboard shows the core processes of the company, in this case we focus on distribution.

Main content

The main part can be customized to show the most important data required by each user.

Monitoring:
-- Real-time core processes
-- show / hide toggle
- Fully customizable through settings

Global charts:
-- Data visualization of main indicators

Sidebar

Customizable sidebar (under settings).

Weather widget (Add on):
- refreshes every 3 hour.
- 3-7 day forecasting

Supplier orders:
- notifications where human intervention is required
- if distribution processes are working normally no notifications will be displayed.

Sales time period selector:
- global data-toggler for all the key processes
- selectable time period (with date picker)

Timeline:
- linear notification / alert list
- messages / comments related to the notification come from the social (HRM) modules of Ecenter

Details of the components

Global charts

These indicators also change depending on the time periods selected. A wide variety of display options are available (line, area, column, pie, donut, etc.). The charts are sortable with drag & drop which automatically scale to size.

Charts:

- Vector based responsive charts (resizable without quality loss)
- Zoomable (Inventory analysis)
- Pie chart slices can be viewed individually and added together (hold Ctrl + click)
- Click on the legends to disable the corresponding data sets

Weather widget

On click shows forecast

Supplier orders

Clicking on the notification numbers slides down actual options to execute.

1. switch it to verify
2. or click on order name to Manage supplies

Sales

Change the time period of the charts. Time period can be defined manually with datepicker.

Revenue per Customer

Revenue per Region

Timeline

Detailed chronological notifications or events.

Most recent happenings on top.

Urgent notifications are displayed with a pulsing effect!

- The notifications in the timeline always contain a [link](#) to the actual problem / event (for example: a dispatch delay or an upcoming meeting).
- Messages / comments related to the notification come from the **social (HRM) modules** of eCenter
- Relevant messages can also be accessed from here (clicking on it will slide down the comments)
- Timeline markers change color if already seen.
- Every notification card can be discarded

Graphic design

Superior Budapest Tour

Fedezz fel Budapest főbb látványait könnyen, gyorsan, kényelmesen. Érintve a kötelezőket úgy, hogy ne maradj le semmiről.

Budapest Downtown tour

Rövidített program azok számára, akik megelégszenek a pesti belvárossal.

Látványok, amiket érintünk:

- Hősök tere
- Vajdahunyad vár
- Carl Lutz rakpart
- Margit-sziget
- Budai rakpart
- Várkereszt Bazár
- Parlament
- Szent István Bazilika
- Opera
- Terror háza
- Andrássy út

Időtartam: 2,5 óra • Betanulás (30 perc)

Látványok, amiket érintünk:

- Hősök tere
- Vajdahunyad vár
- Carl Lutz rakpart
- Margit-sziget
- Parlament
- Szent István Bazilika
- Opera
- Terror háza
- Andrássy út

Szentendre Lopifittel

Azoknak, aik már bejártaak a belvárost, de kíváncsiak mit nyújt még Magyarország Budapesten kívül.

Időtartam: 8 óra • Betanulás (30 perc)

Látványok, amiket érintünk:

- Óbuda - Fő tér
- Romai Párt
- Szentendre

GÁRDEN

Igenyes, romkocsmá jellegű, nyari kerthelyiségekben várunk azokat a vendégeinket, akik meghéznek, vagy megcsomajznak egy elmenyűsítő Lopifit túra után. A GÁRDEN-ben kostolhatod Budapest talán legjobb hamburgerét, de nagyobb társaságaknál bográcscban igazi magyar gulyást is fókusz. Kerti party hangulat a varos szívében.

Kincskeresés Lopifittel

Akiknek annyira megtetszett a Lopifit, hogy egy kincskeresés játék formájában tovább sérülhet rajta, állnak eljárunk együtt feladványokon alapuló, szorakoztató programunkat.

Kalandpark

Ha bevállalod, vagy esetben a kalandozra Szentendrei turánk során tehetőséged van kipróbálni képességeidet kitalpán, vagy részt vehetsz egy gigászi lézerharcban

SO WHAT IS YOGA-ART?

Yoga-Art offers meditation & creativity-lead retreats on multiple locations, worldwide. Our retreats are hidden from society and surrounded by nature.

In the Yoga-Art team you will find yogis, artists, philosophers, shamans, healers, self explorers & travellers of every sort...We are here as a family to share our dreams with you. If you feel like connecting to our INNER-NET, please note:

- *Yoga-Art doesn't follow religions nor does it seek followers. It is a deep encounter of friends & soul-mates. What we are seeking is a group of connected souls who wish to grow and learn together.*
- *Yoga-Art follows the only truth of being ONE. We are all connected & we are all ONE. We express our higher self and the connection of the Universe with the art of living:*

CREATED BY HALLUCINATION

logo, web design, web development

The website features a prominent teal water drop icon at the top center. The main title "Tools for automated fluidic delivery" is displayed in white. A "Let's get started" button is located below the title. The "Problem and solution" section includes a photograph of a laboratory setup with various equipment and plants. The "The team" section features circular portraits of Csaba Konrad and Michelle Zhang, along with their names and brief descriptions. A "Market Analysis" section at the bottom right includes a pie chart icon.

Manatee FLUIDUCS

Problem and solution Team About Contact

Tools for automated fluidic delivery

Lets get started

Problem and solution

Tools for automated fluidic delivery are essential for a wide variety of applications in biomedical research, such as automated cell culture, perfusion microscopy, microfluidics, precise dosing, single organ perfusions or whole animal perfusions, to name a few. The two most common pump designs used today for biomedical fluidic automation are syringe and peristaltic pumps. These designs both have their own strengths and weaknesses; syringe pumps are accurate, can generate high pressures and can produce pulsation free flow, while peristaltic pumps pump volumes indefinitely. An advantage that both designs share over other pumping mechanisms is that parts that come in contact with the fluid are disposable or can easily be cleaned.

Due to open source software and hardware projects, 3D printing has seen a dramatic drop in prices and as a consequence an increase in availability. The number of open source designs of standard laboratory equipment is rising rapidly, on websites such as thingiverse or hackaday, and two new peer reviewed scientific journals dedicated to open laboratory hardware have been founded in 2017. The first open-source syringe pump was published in 2014 (http://www.appropedia.org/Open-source_syringe_pump), which was followed by several other designs, and there are a number of well performing peristaltic pumps as well (eg: <https://www.thingiverse.com/thing:1134817>). These pumps can be built from a fraction of the cost of commercial products, (materials for a syringe pump will cost around ~\$50 and for a peristaltic ~\$30).

Despite the attractive price and modularity, these open source designs have not become mainstream, for which we believe there are three reasons: 1) researchers don't want to spend time collecting the parts and building them, 2) there is very little published on control electronics, firmware and control software, 3) consumers may not be confident about the performance of 3D printed designs.

Out of our own need, we have built a controller and written software that can conveniently control a pump that is driven by a bipolar stepper motor (almost all commercial OEM solutions and open source designs). The controller has up to 5 independent channels that can be controlled in an open- or closed loop fashion. In addition it controls up to 3 solenoid valves, and can be programmed to follow desired sequences. The system is highly versatile: It works with both syringe and peristaltic pumps, syringes from 60 ml to 10 µl, solenoids drawing up to 700 mA and any sensor that produces an analog voltage between 0-5V (currently pressure sensors are tested). The system is modular, one can have up to 5 pumps (syringe/peristaltic or both), with multiple pumps linked to a single feedback sensor.

The team

Csaba Konrad
PhD, postdoc WCM BMRI, Manfredi lab, focusing on bioenergetics and ALS, founder. Csaba builds hardware, writes software and has the wet lab experience for applying the product to real world problems.

Michelle Zhang
hD candidate, Teachers College, Columbia University, co-founder. Michelle focuses on business relations, legal issues and advertising.

Market Analysis

The global infusion pump market was valued at USD 8.12 Billion in 2016. This market is expected to grow at a CAGR of 6.0% during the forecast period (2016–2021) to reach USD 10.84 Billion by 2021. (copy-pasted from marketsandmarkets.com). Target customers are researchers in biomedical sciences.

Competitive analysis

The space is mature and there are plenty of competitors. Low end syringe pumps that are in the price range of our system are exclusively open-loop, single channel, usually non programmable and come with no software interface. There are designs with 2 channels (open loop, 2x cost: <https://www.chemyx.com/syringe-pumps/fusion-100/>) There are designs with higher pressure capabilities (single channel, open loop, 3x cost: <https://www.chemyx.com/syringe-pumps/fusion-6000/>). There are designs with closed loop feedback (single channel, 4-15x cost: <https://www.cetoni.de/en/products/low-pressure-syringe-pump-nemesys-290n/> (get price) <https://cellexltd.com/products/microfluidic-pumps/exigo>). The controller works with most competitors OEM solutions (e.g.: controllers that are open loop and only compatible with their own products (micropumps <https://www.wpiinc.com/products/top-products/make-selection-ump3-ultramicroump?back=products>) (cost?). We believe our product is highly competitive because it is versatile, customizable and highly cost effective.

Design and delivery

Because we believe our product is very competitive, we would like to launch a cost effective marketing campaign. Because the price is far lower than competitors our goal is to build consumer confidence in the product and the brand. First of all, we plan to publish in peer reviewed journals utilizing the product, which is a great way to get to our audience.

Two applications we are working on is semi-high throughput automated perfusion microscopy, and pressure monitored whole animal perfusions. Second, along the same lines we would like to publish a series of online videos, explaining the use of the product and demoing use cases. This is necessary because of the versatility of the product.

We plan to sell only one syringe pump design with a variety of sensors and a single peristaltic pump design, making the product plug and play. The videos are meant to help users unlock advanced features of the system. More traditionally we will also utilize social media and Google's search ads.

Financial information and business model

No outside funding has been received. Revenue will be generated by selling the controller and selected open source pump designs, the software will be freely available.

ANYASÁG & ÉN

Inspirációk a babaszoba berendezéshez

2018 január 11 szólj hozzá anya&baba

Új kedvencem a Houzz lakberendezési portál és applikáció, ahol a baba- és gyerekszoba berendezéshez is milliónyi fotóból merítettek inspirációt. Bevallom rettentenes nehéz volt csak 10 képet kiválasztani, nagyon úgy érzem, hogy ebből egy cikksorozat lesz... 😊 Kapcsolódó cikk: Babaszoba a korai fejlesztés jegyében

Nyereményjáték babylove cumisüveg tartóért!

2018 január 4 szólj hozzá anya&nyereményjáték

Az új év első nyereményjátékában babylove cumisüveg tartót nyerhettek! Ideális otthon és utazásnál is, so-káig melegen tartja a babád kedvenc italait. Partikus tépőzáras fülével könnyen rögzíthető a babakocsihoz, a bézs-tükiz-szürke dizájn pedig még vonzobba teszi! 😊 Mi a teendő, hogy részt vehess a nyereményjátékban? 1. Like-old az Anyaszoba Facebook oldalán a nyereményjátékot meghirdető posztot! 2. Kommentben írd meg nekünk, hogy te milyen itallal teli cumisüveget tennél bele, mi a babád kedvence! Ha még csak anyatejet kap, akkor azt írd meg, hogy mit ...

 BOOKING MOMENTS GIFT FAQ CONTACT

THE FIRST REAL LIVE
ESCAPE GAME IN PALMA DE
MALLORCA !

Bring your team and try to escape from the Secret Agent's room !

[BOOK NOW](#)

This is a new craze sweeping Majorca! We take you and your team back to the 1970s into the east part of Europe to the communist block and turn you into secret agents. Your challenge? To crack codes, work out brain teasers and overcome unexpected twists in order to escape from the enemy secret agent's office. If you are brave enough you can dive into a secret agent's everyday life through this secret mission. Harder still, you have to do it all in 60 minutes - or less. All you will have is your wits as you solve the logic problems and codes that are your only hope.

If you think you and your friends or family have the brains, wits and skills to work together against the clock, then put it to the test at CityRoomEscape!

[How to play?](#)
